

ZENELAIT HRMS

COMPREHENSIVE ROLE-BASED ENTERPRISE MANUAL

An all-inclusive, tier-scoped platform designed for modern workforce management. Built by Zenelait InfoTech Private Limited to streamline workflows from onboarding logistics to real-time payroll analytics.

CORPORATE PROFILE

Zenelait InfoTech is a leading software engineering firm dedicated to building next-generation enterprise applications. We specialize in designing customizable SaaS platforms that integrate HRMS, CRM, and supply chain networks into unified hubs.

ZENELAIT HRMS VISION

Zenelait HRMS enables multi-tenant organizations to achieve 100% data transparency. Our platform bridges the gap between manual attendance logs and corporate auditing, delivering automated compliance checks and high-resolution PDF expense voucher compilations.

OFFICIAL CONTACT & SECURITY NOTICE

This document is proprietary information of Zenelait InfoTech Private Limited. Unauthorized reproduction or distribution of this manual is strictly prohibited. All system configurations, database connections, and REST API paths are subject to security audits.

TABLE OF CONTENTS

DOCUMENT NAVIGATION INDEX

Detailed page distribution index mapping all sections and roles within the Zenelait HRMS ecosystem:

1. System Architecture & Multi-Tenant Databases	Page 3
2. Landing Page, OTP Gateway & Access Controls	Page 3
3. Super Admin Portal (Tenant Configurations & Health)	Page 4
4. Subscription Tier System (Modular Control & Active Plans)	Page 4
5. HR Admin Portal (Directories, Recruitment & Appraisals)	Page 5
6. Expense Ledger (Reimbursements & Printable PDF Vouchers)	Page 5
7. Attendance & Worklog Tracker (Timekeeping & Task Logs)	Page 5

*Security Note: User role configurations are validated dynamically at database query compile-time.
Any role modification requests are routed via Spring Security filters and strict JPA constraint guards.*

SYSTEM ARCHITECTURE

BACKEND REST APIS, FRONTEND ROUTING, AND AUDIT PIPELINES

Zenelait HRMS employs a highly scalable, decoupled client-server architecture model. The client-side dashboard runs on Next.js 14 / Vite, connecting to a multi-threaded Java Spring Boot 3 enterprise backend and a high-performance MySQL/TiDB Cloud relational storage.

TECHNICAL STACK DETAILS

Layer	Technology	Responsibility
Frontend Client	Next.js 14, React, TS, Tailwind CSS	Role Dashboards, Real-time Charts, Responsive Layouts
Java Backend	Spring Boot 3, Java 21, Hibernate JPA	Business Logic, Multi-tenant Data APIs, Security Filters
Messaging Queue	Apache Kafka (Port 9092)	Asynchronous Audit Logging & Event-driven Logs
Cache Broker	Redis Cache (Port 6379)	Performance Optimization & API Response Serialization
Database	MySQL / TiDB Cloud (Port 4000)	Transactional Ledgers, User Accounts, Registry

SECURITY FILTER CHAIN & DECOUPLING

All network interactions use JSON-encoded requests. Spring Security handles endpoint protection, verifying signature validation keys encoded in client-header HTTP bearer authentication tokens on every dispatch.

The backend employs database connection pools (HikariCP) to interact with relational schemas, ensuring fast transactional speeds during high-concurrency workforce attendance logging.

SUBSCRIPTION TIERS

MODULAR CONTROL AND PRICING PLAN MAPPINGS

To provide flexible enterprise SaaS packages, Zenelait HRMS employs an active subscription mapping engine. The modules, dashboards, and role dropdowns rendered on login screens are toggled dynamically based on the tenant organization's active subscription tier.

GROWTH PLAN

Designed for small operations. Unlocks employee clock-in/out registers and self-service. Excludes deep financial ledger control.

PREMIUM PLAN

Adds middle-tier control. Unlocks full HR Manager control panels, Sprint velocity trackers, custom timesheets, and basic payroll metrics.

ENTERPRISE PLAN

Full platform access. Enables the Super Admin console, multi-tenant custom organization settings, Kafka audit streams, and Redis cache tuning.

DATABASE CONFIGURATION & VERIFICATION

The `organizations` table stores subscription levels under the `plan\_type` column (STANDARD, MIDDLELEVEL, ENTERPRISE). When a user authenticates, the handler queries `GET /api/superadmin/organizations` to fetch their tenant context, parsing the subscription plan type to dynamically configure permission matrices on the frontend client.

ROLE-BASED ACCESS

ROLE MAPPING MATRIX AND PERMISSIONS CONTROL

Zenelait HRMS provides strict role-based access control (RBAC) to ensure multi-tenant security isolation. Users are assigned to one of three primary system roles, each unlocking a dedicated set of system controls:

SUPERADMIN

Accesses the platform console. Creates tenant organizations, configures active modules, assigns subscription plan tiers, and provisions primary HR Administrator accounts. Bypasses standard organization scope limits.

ADMIN (HR MANAGER)

Manages the organization roster. Approves or rejects leave requests, schedules project sprints and backlogs, uploads client invoices, processes employee payroll, and updates individual employee matrix keys.

EMPLOYEE (TENANT STAFF)

Maintains attendance clocks, logs timesheets against active projects, files reimbursement expense claims, uploads receipts, and downloads certified PDF payment vouchers.

Zenelait HRMS - Secure. Compliant. Scalable.

Enterprise software architecture engineered to optimize modern corporate workforce networks.
