

Zenelait HRMS - Voucher Documentation

Official API Specifications & Role Permissions Matrix Report

1. Role-Based Access Matrix

Superadmin (System Administrator):

- Provision tenant organizations and assign active configurations.
- Provision primary HR Admin accounts for tenants.
- Edit subscription plans and bypass registration locks.

HR Admin (Tenant Administrator):

- Review, audit, approve or reject pending employee reimbursement requests.
- Provision employee accounts and assign role-based permissions (RBAC).
- Execute payroll payouts and clear expense claims.

Employee (Tenant Staff):

- File corporate expense claims, upload receipts, and track audit status.
- Preview, print, or download personal reimbursement vouchers in PDF format.

2. API Specifications & Endpoints

GET /api/superadmin/hrs

Description: Fetch list of active HR accounts across all organizations.

POST /api/superadmin/hr

Description: Create a new HR Administrator account for a tenant.

PUT /api/superadmin/hr/{id}

Description: Modify an HR Administrator account coordinates or password.

DELETE /api/superadmin/hr/{id}

Description: Permanently delete an HR Administrator profile.

3. Interface Layout & Printing Specifications

The Expense Voucher modal generates a printable document including:

- Organization Name and specialized serialized code format.
- Printable signature blocks for Employee Claimant, HR Admin, and Signatory.
- Embedded action triggers to prompt system save-to-pdf outputs.
